

Risk Assessment and Risk Register

Even though the bank is in a low-crime area, it handles highly sensitive financial and customer data across multiple systems and personnel, increasing exposure to digital threats such as phishing or poor data controls. Remote employees and large account volumes increase the chance of email compromise, insider threats, or data leakage. Natural disasters in the coastal region may affect supply chains, impacting the availability of financial resources and systems.

Asset	Risk(s)	Description	Likelihood (1–3)	Severity (1–3)	Priority (L × S)
Funds	Business email compromise	An employee is tricked into sharing confidential information	3	3	9
Funds	Compromised user database	Customer data is poorly encrypted	2	3	6
Funds	Financial records leak	A database server of backed-up data is publicly accessible	2	3	6
Funds	Theft	The bank's safe is left unlocked	1	2	2
Funds	Supply chain disruption	Delivery delays due to natural disasters	1	1	1

Reasoning for scores:

- **Business email compromise:** High likelihood (phishing is common) and high impact on finances, customers, and compliance → **9**
- **Compromised user database:** Moderate likelihood, high regulatory and confidentiality impact → **6**

- **Financial records leak:** Moderate likelihood due to misconfigurations, high impact → **6**
- **Theft:** Low likelihood (low crime area, limited physical access), moderate impact → **2**
- **Supply chain disruption:** Low likelihood, low impact on daily banking operations → **1**
